

INTERNSHIP AIRBUS INNOVATION CELL

Airbus Innovation Cell is proposing internships in the field of disruptive innovation; the working area encompasses the complete innovation management cycle:

- Analysis of potential innovation trends and business opportunities, market surveys and innovation benchmarks
- Active support of idea generation and/or co-development of novel approaches
- Efficient elaboration of innovation project proposals, application scenarios, value propositions and fast prototyping
- Means of compliance and implementation support for “high speed” innovation (quick wins and very short time to market)

The specific focus of the internships is on collaborative means to enable an effective community approach

- (1) the use of a (virtual) community platform for innovative idea development and
- (2) the use of effective scenarios techniques in the analysis and evaluation of innovation potential

The concrete use case will be subject of discussion between the candidate and respective Airbus Innovation manager.

The internships will run on a full time basis and take place at Airbus Innovation Cell offices in Hamburg, Airbus Operations GmbH.

We think a minimum period of 5 to 6 months is necessary to successfully perform a project and document the results.

You have the possibility to combine the internship with a Bachelor/Master/Diploma thesis).
